

Energy Policy

We, at TVS Motor Company, a leading mobility solution provider, shall strive for embracing Energy efficient products and processes that contribute significantly towards carbon footprint reduction. This will help us in continually improving Energy efficiency and meeting our long-term sustainability goals such as EP100, RE100 and shall pave the path for Net zero. We are committed to:

- **Responsible and Aligned:** Operate with the utmost integrity by adhering to all statutory and regulatory requirements, while seamlessly integrating our efforts with the United Nations Sustainable Development Goals (SDGs) for a holistic approach.
- **Science-based Target:** Embrace science-based targets (SBTi) for greenhouse gas emission reduction, ensuring our path aligns with a 1.5°C warming scenario and a sustainable future.
- **Leading through Innovation:** Sourcing industry-leading energy-efficient products, surpassing benchmarks and setting new standards for responsible resource utilization.
- **Empowering Knowledge:** Cultivate a culture of awareness and action, empowering our employees and value chain partners through comprehensive training and awareness programs on energy conservation practices.
- **Design for Efficiency:** Optimization of facility design and equipment selection by energy performance considerations into every aspect of designing the manufacturing processes with the aim of achieving EP100 by 2030* (baseline 2019).
- **Champions of Renewables:** Powering our journey with 100% renewable energy, aligning with the ambitious RE100 target by 2030*.

This policy commitment shall be achieved through relevant stakeholder's (in the value chain) engagement in establishing, implementing, and maintaining a strong governance program based on Energy Management System and the road to a sustainable future shall be paved with digitalization, automation, and collaboration.
